

FROMM TOPPRESS

Application: Wrapping of instable pallets, with load force control

The advance of our system:

- Can be supplied optionally on the FS1 "CENTO" and FS3xx machines;
- System is plug and play with power source, 230 volt directly from the machine;
- Manually plate movement up and down, by means of pushbuttons;
(Later we will have an automated system with the new OP 3 which is in development)
- Press is motorized, Minimal pallet height 800mm / Maximum according column height;
- No air required, thus no stroke limitations; (We do not use pneumatic cylinders!)
- Press is controlled by an extra inverter installed directly on the unit;
- Pressure on top of the pallet can be adjusted via sensor and installed bracket.
- Easy to install. Also if required later as optional.

Transport: by means of lifting eye.

Power: 1 phase 230V / 1 kW – IP54.
